Trenton, NJ – To better prepare New Jersey for future disasters, the Christie Administration today announced more than \$2.8 million in federal grants to county emergency management agencies to prepare comprehensive hazard mitigation plans.

“With the destruction of Superstorm Sandy still fresh in our minds, now is an ideal time to consider how we can be better prepared in the future,” said Governor Christie. “These hazard mitigation plans will help county officials apply lessons learned from Sandy to their long-term planning to make their towns more resilient.”

Renewing hazard mitigation plans is part of the Christie Administration’s commitment to rebuild stronger. These funds will allow the counties to build upon the planning activities funded by the State under the Community Disaster Block Grant – Disaster Relief (CDBG-DR) program. The CDBG-DR grants provide funding for communities to conduct a variety of post-Sandy planning activities, including developing a strategic recovery plan, preparing community design standards specific to flood hazard areas, and analyzing local land use practices. Details of that program are available at <http://www.nj.gov/governor/news/news/552013/approved/20130618e.html>.

By planning now, the Christie Administration aims to realize creative and implementable long-term hazard mitigation measures in collaboration with its local partners. These initiatives supplement the hazard mitigation projects already underway, including home elevations, buyouts, and beach restoration and protection projects, among other measures.

“The county hazard mitigation plans are a critical step in helping communities prevent future damage,” said Colonel Rick Fuentes, Superintendent of the New Jersey State Police. “By taking decisive action now, we can save lives and avoid property damage in the future.”

The Federal Emergency Management Agency (FEMA) awards hazard mitigation funds to states after declared disasters. The Christie Administration is allocating some of the available funds to help counties revise their approach to storm preparedness and achieve multiple goals, including:

- Protecting public safety and preventing loss of life and injury;
- Reducing harm to existing structures and infrastructure, as well as future development;
- Preventing damage to New Jersey’s unique economic, cultural and environmental assets;
- Minimizing operational downtime and accelerating recovery of government and businesses after future disasters;
- Utilizing an open public involvement process, including seeking input from a wide range of stakeholders that have a signification role in plan implementation;
- Improving public understanding of risks and options to reduce the effects of natural disasters; and
- Reducing the cost of disaster response and the exposure to risk for first responders.

Fourteen counties will receive funding in the amounts listed below. These amounts represent FEMA’s 75% share of the costs of the projects. The remaining counties have previously received FEMA funding to update their hazard

mitigation plans.

County	Award Amount
Gloucester	\$ 200,000
Morris	\$ 200,000
Passaic	\$ 250,000
Atlantic	\$ 150,000
Cape May	\$ 250,000
Cumberland	\$ 200,000
Middlesex	\$ 250,000
Union	\$ 250,000
Warren	\$ 200,000
Hunterdon	\$ 200,000
Mercer	\$ 125,000
Sussex	\$ 200,000
Camden	\$ 200,000
Salem	\$ 200,000
Total	\$ 2,875,000
